*"A new standard of progress in all the products of **INNOVATIVE BLOCK.**"*

The sharply focused strategy of INNOVATIVE BLOCK is to produce the newest, the highest quality grey block in four grades:

SPECIALTY BLOCK – We make 3,500 PSI and 4,000 PSI blocks for demanding applications and hurricane resistant structures.

GREEN BLOCK – Our most affordable, recycled & environmentally-friendly block that is LEED-compliant and flexible for many applications. This block meets all ASTM strength and absorption requirements.

MEDIUM WEIGHT – Developed for the architect that desires reduced shrinkage over large spans. Our medium weight block is used in schools, large commercial projects, and many other typical block applications. Less aggregate content results in better absorptive properties.

NORMAL WEIGHT– Our most economical block often used where price is the primary consideration and structural weight is not as critical.

These quality blocks—from stretchers to lintels, bull-noses to half-blocks, come in more than 30 types to meet the needs of every builder. Thanks to the capacity and inventory of INNOVATIVE BLOCK, these blocks are quickly available on-demand and on-time.

The INNOVATIVE BLOCK strategy for all of our products is to make it better, deliver it faster, make it greener, and make it easier to buy and install - each time, every time, with every customer. It is the INNOVATIVE BLOCK standard of production, delivery, and service.

Central to our strategy is to work closely with each customer and client to find the intersection of exact price and grade that fits perfectly with your building needs and budget requirements.

The INNOVATIVE BLOCK strategy for all of our products is to make it better, deliver it faster, make it greener, and make it easier to buy and install---each time, every time, with every customer. It is the new INNOVATIVE BLOCK standard of production, delivery, and service.
